Abstract (en)
[origin: WO2008125788A1] The invention relates to a cyanine derivatives of the formula in which: the dotted lines are atoms necessary for the formation of one or two fused aromatic cycles, each cycle including 5 or 6 carbon atoms; R₁, R₂, R₃, R₄ are independently H; substituted or non substituted C₁-C₁₅ alkyl; C₁-C₆ alkoxy; C₂-C₁₂ dialkylamino; C₁-C₆ alkoxycarbonyl; C₂-C₁₂ dialkylamido; a substituted or non substituted aryl, arylalkyl or aryloxy group; a halogen atom; nitro; a L1 -W, L2-M, L2-A or L2-G group; R₅, R₆ are independently: substituted or non substituted C₁-C₁₅ alkyl; a substituted or non substituted aryl or arylalkyl group; a L1 -W, L2-M, L2- A or L2-G group; X is selected from O, S, CR₇-R₈; Y is selected from O, S, CR₉-R₁₀; R7, R8, R9, R10 are independently: substituted or non substituted C₁-C₁₅ alkyl; substituted or non substituted aryl, arylalkyl or aryloxy; a L1 -W, L2-M, L2-A or L2-G group; R₇ and R₈ and/or R₉ and R₁₀ may also form together a cycle with 5 or 6 atoms or a heterocycle including 4 to 5 carbon atoms and a hydrogen atom; B is a polymethine bridge including 1 to 5 methine groups, said groups being in particular and individually substituted or non substituted by a substituted or non substituted C₁-C₁₅ alkyl; nitro; a L1 -W, L2-M, L2-A or L2-G group, L1, L2 being binding arms; G is a reactional group; A is a coupling agent; M is a conjugated molecule; W is a phosphate or phosphonate ester (preferably diester) provided the cyanine derivative includes at least one L1 -W group and at least one L2-A, L2-G or L2-M group. The invention can be used or fluorescent compounds for marking biomolecules in cells.
