Abstract (en)
[origin: WO2008113431A1] The invention relates to a device for assembling a first board (P1) and a second superimposed board (P2), intended to extend axially through an opening formed in each board (P1, P2). The device includes a connection base (10) provided with means for attachment onto the first plate (P1), and a captive locking member (11) having an elongated body (12) mounted in the connection base (10) and a retaining head (13) for the second plate (P2). The locking member (11) has a failure area (21) provided between the retaining head (13) and the elongated body (12) of the locking member (11).
