Abstract (en)
[origin: WO2008110514A2] The invention relates to a refrigerating apparatus, comprising a chamber (3, 4), at least one outer envelope (1) that encloses the outside of the chamber (3, 4), a connecting element (5), one end of which connects to the opening (31) provided on the chamber (3), and an insulating layer (2) that encloses the outer surface of said chamber (3) and fills the space between the outer wall (1) and the chamber. The inventive refrigerating apparatus further comprises at least one fixing extension (54), formed at the end of said connecting element (5) and disposed in the vicinity of the opening (31) and while being in contact with the interior of the adjacent chamber (3).
