Abstract (en)  
[origin: DE102007010400A1] The verification system has a transponder, like Radio frequency identification (RFID) Chip, which is particularly permanently and undetachably arranged on article and by which information of article and its status is stored as transponder information. A device for identification the transponder by transponder information stored in transponder. A unit for storing reference information in terms of transponder information. The central administration comprises devices for storing reference information. Independent claims are also included for the following: (1) a transponder (2) a method for marking of articles.
