Abstract (en)

The bib is constituted by an oversized body made of a material possessing a high degree of absorption for holding the liquid in the event of a vomit produced by a child traveling in a means of transportation, be it an automobile, an airplane, etc., the aforementioned body (1) possessing on its ends elements (2 and 3) for holding to the neck of the child (4) and to the seat (5) located in front of the seat (6) where the child (4) sits, so that in the event of a vomit the body (1) of the bib holds the vomit without it spilling to the sides, previously locking the supplementary means (7 and 8) established on the sides of the body (1) of the bib.
