Abstract (en)
Disclosed is a boot shape keeper capable of holding a boot in a fixed shape, removing malodor from the insole of the boot by allowing the insole of the boot to be opened to outside air while the boot is held, and capable of adjusting the height to the shaft part of the boot. The boot shape keeper, which is inserted into a shaft part 21 of a boot 3 to keep a shape of the shaft part 21 of a boot, includes a cylindrical body part 30 made by forming a plastic sheet 10 having a gas pre-encapsulated into a cylindrical shape, and at least one projecting part 32 projecting downward from a lower end of the body part 30, wherein the body part 30 has a fixed shape provided by the encapsulated gas, and the projecting part 32 has a gas pre-encapsulated, and allows the gas to be fed into and out between the body part 30 and the projecting part 32, so that the projecting part 32 is elastically contractable up and down.
