Abstract (en)
The cylinder (1) has a cylindrical pin arranged in a separating plane (12) between a circular cylindrical part of a housing (2) and a lock core (3). A lock element (14) projects laterally into a key channel (4) of the lock core with a gearwheel-like tooth. The lock element has a lock body (18), which produces a form-fit connection between the lock core and the housing in a locked position. A return spring is pushed from the locked position by a displacement element, which is linearly movable relative to the lock element by a coupling and separated from the lock element.

Abstract (de)
Die vorliegende Erfindung betrifft eine Kombination aus Profilschließzylinder mit zugehörigem Schlüssel, die neben den üblichen federbelasteten Stiftzuhaltungen ein weiteres Sperrelement aufweist, welches in Sperrrichtung unter der Vorlast einer Rückstellfeder steht und über eine Zahnrad-Zahnstangen-Kombination in Drehbewegung versetzt wird.
