Abstract (en)
[origin: EP2133510A2] The device (11) has a rotor part (21) rotatably supported in a housing (36). The rotor part comprises a coupling section (24) at an end (23) for torque-proofly connecting the rotor part with a boring device (8), and a coupling retainer (26) at another end (25) for torque-proofly retaining a free end (6) of a fastening element (5). Seal elements (42) i.e. grooved rings, are arranged between the housing and the rotor part for sealing a channel section (32). The housing includes a housing part (41) comprising the seal elements and another housing part (51) comprising bearing elements (52, 53).
