Abstract (en)
[origin: EP2133648A1] The unmanned missile (1) has a fuselage (10) with a payload. Control surfaces (16) are fitted on the fuselage, and are moved by control surface actuators. A drive device (14) is provided for the missile. An on-board computer (30), which has a mission data memory (32) and a control computer (34), impinges the control surface actuators with control signals. A mission planning computer (36) is connected with the mission data memory for exchanging data. Data communication devices (17,31) are connected with the mission planning computer for data exchange. An independent claim is included for a method for flight control of unmanned missiles.
