Abstract (en)
[origin: EP2133653A2] The projectile (1) has a flammable smoke producing substance (2) accommodated in chambers (3, 4) of the projectile, and pyrotechnical self-destroying loads (5, 6) separated from each other. The chambers are provided in a housing (22). The self-destroying loads cause smoke production and distribution of the smoke to different points. The load (6) is arranged on a side of the projectile. The chambers and the loads are arranged along a longitudinal axis of the projectile. A separating wall (13) is provided for separating the chambers.
