Abstract (en)

[origin: WO2008145889A2] The present invention relates to cosmetic compositions used in the care and makeup field. This composition mainly comprising a continuous aqueous phase, a fatty phase and a pulverulent phase of fine and porous copolyamide powder, is in the form of creamy, liquid or gelled compositions. It is in particular an emulsion, but this may also be a two-phase formulation or composition in which the fatty and aqueous phases are separated. The invention more particularly relates to care and/or makeup cosmetic compositions that have a continuous aqueous phase in the case of an oil-in-water emulsion.
