Abstract (en)
[origin: WO2008122141A1] The product basically consists of Saxolith®, a crystalline marble-based filler, and Erkamar®, a binder having adhesive properties. The product preferably also contains dimethyl ethanol amine to improve the dissolution of resins and to stabilize the pH, as well as isopropanol as the diluent, Sipernat® to improve the flow properties, Agitan® as defoaming agent and coagulant, as well as Byk® to improve the flow properties and as a filler. The product is produced by adding Erkamar® to at least the same quantity of water, mixing it and stirring it for a few hours, cooling the mixture to room temperature, and adding at least the same quantity of Saxolith® as previously Erkamar® and stirring until a homogeneous mixture is obtained.
