Abstract (en)
[origin: WO2008107198A1] The invention relates to a closure device (3) for a drinking container (1) comprising an interior space (10) for accommodating a drinking liquid and a container orifice which is preferably located at the upper end and in which the closure device (3) with a receiving chamber (4) is provided, the content of said receiving chamber (4) being introducible into the interior space (10). The invention is characterized in that at least the upper region of the closure device (3) is provided with an externally threaded part (5) which forms a receiving chamber (4) along with a bottom covering area (6) and intermediate joining elements (8), the receiving chamber (4) being fitted with an inlet orifice (14) at least in the bottom region. The content of the receiving chamber (4) can be released using a twisting-in process. According to the invention, the drinking container is preferably used for preparing an unstable mixed beverage containing creatine powder and an aqueous drinking solution.
