Abstract (en)

[origin: WO2008145880A1] The invention relates to a lighting device (0) including a power supply housing (12), a lighting head (16) including at least one light source, a connection arm (18) having an elongated shape, the arm including a first end connected to the housing and a second end connected to the head (16) in order to mechanically connect the housing (12) and the head (16), the latter being mobile relative to the housing (12) between a first position in which the head (16) is in the vicinity of and/or connected to the power supply housing (12), and at least a second position in which the head (16) is remote and/or disconnected from the housing (12). The length of the arm (18) is lower than or equal to the largest dimension of the power supply housing (12).
