Abstract (en)
[origin: WO2008110667A1] One measuring part (106) of a traversing measuring unit (104) measures at least one characteristic of a web (14) with a first radiation type from a plurality of measuring locations (112) during a traversing movement at successive moments in time. At least two measuring parts (108) of an array measuring unit (102) measure at least one characteristic of the web (14) with another radiation type during each traversing movement at a plurality of different moments in time by directing the measurement to a plurality of measuring locations (110) in the web (14) at each moment in time. A signal processing unit (114) is arranged to estimate at least one characteristic measured by the traversing measuring unit (104) with at least one measurement of the array measuring unit (102).
