Abstract (en)

[origin: WO2008113580A2] According to a data transmission method, data is exchanged, by means of a network, between a mobile electronic device (30) in which a transceiver is integrated, and at least one computer (10) or server that is associated with or allocated to the user of the device (30). The control commands are input into the device (30) by means of the keyboard, mouse or similar and are transmitted to the respective computer via the network. Said commands input into the device (30) are carried out by the computer (10), as if the commands had been input directly into the computer. The representations generated by said computer (10) that can be visualised on the screen are retransmitted to the device by the network (30) and visualised on the screen (33) of the device (30).
