Abstract (en)

[origin: EP2135668A1] The device (10) has a set of containers storing respective base colors of paint, where each container has an orifice for expulsion of the colors. A carousel carries the containers, and includes a set of radial cells (14), each defining an enclosed inner volume to accommodate a flexible deformable pouch containing a base paint, in a sealed manner. The cell and the associated pouch form a container. Each cell has a passage for communicating the inner volume with a pressure source e.g. compressed air source, previous to the expulsion of preset dosage of the color. An independent claim is also included for a method for preparing a mixture of base colors of paint.
