Abstract (en)

[origin: EP2135677A1] A jaw crusher includes a machine with a moving base (60), a fixed base (70), a crush travel adjusting mechanism (80) for pivotally coupling the top of a crush travel adjusting base (81) to the machine (50) by an eccentric sleeve(812), and an automatic crush gap adjusting mechanism (90). A toggle plate (82) is installed between the crush travel adjusting base (81) and the moving base (60). A pull rod (83) of the moving base (60) having a compression spring tightly presses front and rear ends of the toggle plate (82). The automatic crush gap adjusting mechanism (90) fixes a steel slot (91) of a stop plate and a pair of triangular wedge-shaped lumps (92) to the position adjusting base (93) of the machine (50), and the stop plate (94) is installed between the steel slot (91) and the crush travel adjusting base (81), and a pull rod (95) of the adjusting base having a compression spring tightly presses both front and rear ends of the stop plate (94).
