Abstract (en)

[origin: EP2135682A1] The bottle has a body (1) defining a liquid product packing reservoir, and a penicillin type neck (2) arranged above the body. A sleeve (8) positions and fixes a pump (3) relative to the body. The sleeve has a skirt (18) deformable between a mounting configuration in which the skirt is positioned around an outer side wall (19) of the neck and a fitting configuration of the skirt around the wall to fix the pump. The wall is provided with a relief screw thread (22) arranged for being embedded in the skirt in the fitting configuration to permit unscrewing of sleeve after fixation of the pump.
