Abstract (en)

[origin: EP1352742A1] Method for controlling sheet supply to a sheet processing machine with a sheet feeder, which is driven by a number of individual drive elements that are controlled by processing electronics that are connected to the controller of the subsequent machine. In order to remove a sheet stack from the feeder, e.g. if a sheet mis-feed has occurred, synchronization of the different feeder drive elements is interrupted by the processing electronics allowing them to be controlled as required.
