Abstract (en)

[origin: EP2135828A2] The present invention relates to a winding apparatus (10) of a fibrous web (W), which comprises at least one support element (13,14) supporting a reel (11) of its surface when winding which is movably supported to a support structure by control elements determining the path of the support element (13,14). The winding apparatus (10) comprises an elastic and/or damping arrangement (30) which enables changing the elasticity and/or damping of the support element (13,14) in two different directions/degrees of freedom during the use of the winding apparatus (10) and/or the motion of the support element (13,14). The invention also relates to an equivalent method.
