Abstract (en)
A locking device, especially for covers, caps, door and window wings, comprising a case (22) having a bottom (23) and a cover (24), wherein a toothed pinion (12) is accommodated in pivoting manner inside the case (22) and a locking pin (38) is arranged tangentially slidably thereto. A circular socket (27) is arranged at least in the bottom (23), the toothed pinion (12) is accommodated in a pivoting manner in the circular socket (27), a vertically shifting control pin (2) is arranged in the axis of the toothed pinion (12), wherein a longitudinal socket (37) is arranged at least in the bottom (23) and oriented tangentially with respect to the toothed pinion (12), the locking pin (38) being arranged slidably in the longitudinal socket (37) and being provided with annular notches (39, 40, 41, 42) at its central part, by means of which the locking pin (38) engages the respective teeth (44) of the toothed pinion (12).
