Abstract (en)

[origin: EP2136026A1] The device (D) has a U-shaped joint (300) associated interiorly with edges of a pair of glass panels (210, 220) and externally associated with edges of a U-shaped recess (130). A plastic joining piece (400), on a portion of height of posts formed by a frame (100), is inserted between one of the edges of the panels and one of profiles (110, 120) of the frame. The piece forms a closed chamber, in which a joining sealant is introduced, between a glazing pane (200) and the other profile of the frame.
