Abstract (en)

Test bench for a pumping unit (11), able to pump concrete or other similar materials. The test bench comprises support elements (20a, 20b), able to support the pumping unit (11), and a tank (26) containing a fluid, from which the pumping unit (11) is able to take the fluid in order to convey it in correspondence with pipes defining a circuit (27) associated with the pumping unit (11) and with the tank (26). The circuit (27) is provided with valve elements (28) able to be adjusted so as to vary the pressure of the fluid circulating so as to evaluate the functionality and resistance of the pumping unit (11) as the pressure varies, the whole being controlled by command and control members (33) also able to control and command the functionality of the elements that make up the test bench.
