Abstract (en)
[origin: EP2136136A1] The present invention relates to a light fixture comprising a head, a yoke and a base, which yoke comprises handles for carrying the light fixture. Placing the handle at the upper part of the yoke is very efficient if the light fixture is to be carried. Access to these handles is possible directly in a flight case because above the yoke there is sufficient space for getting access to the handle. In terms of small light fixtures, an individual can easily carry the light fixture by these handles and safely lift the light fixture from a flight case. In the case of very large light fixtures, two individuals can from both sides of a flight case carry the light fixture by the handles. By placing the handles as high as possible in relation to the light fixture, the light fixture can be carried in a very stable manner.
