Abstract (en)

[origin: EP2136271A1] The device has a switch mechanism comprising a rotating arbor kinematically connected to an indicator. A sliding wheel set is secured to a rotating arbor and provided for sliding via action of a manual control device to selectively occupy an axial position in which the sliding wheel set is coupled with a counter wheel set. The sliding wheel set is coupled with another counter wheel set in another axial position. Phase synchronization and lock units adjust an angular position of the rotating arbor of the counter wheel sets when the sliding wheel set occupies the axial positions.
