Abstract (en)

[origin: FR2913411A1] The assembly has four rigid front and rear legs (5) including stops that are placed at intermediate height. The legs are applied against respective angles of a lateral surface of a parallelepiped shaped cardboard case (2) of a prismatic or cylindrical shaped bag-in-box (1). The stops serve as support points that support a base (4) of the box. An elastic strap (6) encircles and locks the box and the legs applied against the surface of the box. Feet (11) are placed at ends of the legs.
