Abstract (en)

[origin: WO2008113476A1] The invention relates to a hospital bed (1) which has a central controller (57) for operating the electric drives. In order to be able to lower the backrest (25) quickly in the event of an emergency for reanimation purposes, a special operation is possible in which a voltage is applied to the motor (44) for the backrest (25), said voltage exceeding the voltage that is applied to the motor during normal operation.
