Abstract (en)

[origin: WO2008125351A1] The invention relates to a carrier material for use as a placeholder during the construction of workpieces, having at least one free space, the carrier material being made a corrodible material, wherein the corrodible material is a mixture or alloy of magnesium and at least one further metal component, the normal potential of which is larger than that of magnesium under reaction conditions, wherein the material has been compacted using a mechanical stressing method.
