Abstract (en)

[origin: WO2008129049A1] The invention relates to a device (1) for fastening a measurement or display unit (10, 17, 18) to an object (15), comprising a longitudinal guide element (6) on which an orientation aid (2) and a holder (11) for the measurement unit (10, 17, 18) or for the display unit are disposed such that they may be slid in the longitudinal direction of the guide element (6), wherein the orientation aid (2) and the holder (11) are positionable relative to one another such that the object (15) is held in a clamping fashion between the orientation aid (2) and the holder (11) or a mounted sensor (17, 18), and wherein a spring-mounted retightening device (3, 5) is provided, by means of which the measurement or display unit (17, 18) may be pressed against the object (15) with a defined pressing force.
