Abstract (en)

The fabric has pre-solidified base fibrous web formed of viscous fibers and exhibiting a reduced portion of bonding agents and/or fusible fibers made of thermoplastic polymer material. The fabric contains polypropylene fibers. The agents are partially cross-linked or not entirely cross-linked, and are obtained from polymer dispersion. The agents are present on a side of the web. The agents are introduced into the web by foam impregnation. The agents act as thermoplastic binders on basis of acrylic resins or as crosslinkable binders on basis of vinyl acetate copolymers.

Abstract (de)

Die Erfindung betrifft einen Vliesstoff zur Verwendung als feuchtedurchlässiges, mikroporöses Genussmittelverpackungsmaterial, der aus einem Grundvlies aus Viskosefasern, der mittels Wasserstrahl vorverfestigt ist, besteht und einen reduzierten Anteil an Bindemitteln und/oder schmelzbaren Fasern aus einem thermoplastischen Polymermaterial aufweist.
