Abstract (en)

[origin: EP2138397A2] The sensor has sensor adjustment levers (2) pivotably mounted at a sensor housing (1). The levers are brought into correlation with a corresponding scale (5) of a dynamic display panel (4) of a flat LCD display by a stopping mechanism (3). The scale is arranged at the housing. Electrical input units e.g. keypad (7), are provided for manually selecting predefined driving programs e.g. normal driving program. An electronic control unit (6) displays the scale, which is suited to the selected driving programs, in the display panel. Independent claims are also included for the following: (1) a method for remotely controlling a ship drive (2) a computer program product comprising instructions for performing a method for remotely controlling a ship drive.
