Abstract (en)
The present invention is directed to a compressor including a compression mechanism, a motor, and a casing. The vibration and the noise of the compressor due to the vibration of the motor are reduced. A compressor (1) includes a compression mechanism (2), a motor (4) coupled with the compression mechanism (2) via a driving shaft (5), and a casing (10) for accommodating the compression mechanism (2) and the motor (4). The motor (4) includes a stator (41), and a rotor (42) disposed inside the stator (41) and coupled to the driving shaft (5). The stator (41) is spot-joined to the casing (10) via a plurality of stator-side welded portions (6a, ... , 6b, ...) provided at different positions in an axial direction of the driving shaft (5). The plurality of stator-side welded portions (6a, ... , 6b, ...) are provided at different positions in a circumferential direction of the driving shaft (5).
