Abstract (en)
The system and method described herein relate in part to intuitive methods for creation and design of lighting sequences, e.g. for theatrical, entertainment, or advertising purposes, using a software interface. Additionally the lighting sequences can be coordinated with control of additional devices. Also described herein is a controller capable of executing programs for lighting sequences and modifying the output and/or execution of the program based on external signals. In this way the final output can be made responsive to external stimuli, or even interactive.
