Abstract (en)  
[origin: FR2912979A1] The system has a generation module (20) for generating retraction force on an accelerator pedal (19), where the pedal forms a control unit for controlling power actuated by a driver of a hybrid motor vehicle (1). An electronic control unit (13) controls the generation module when an electrical operating mode of the vehicle is activated, such that the generation module generates another retraction force when the movement of the pedal attains a threshold. The latter retraction force is higher than former force. An independent claim is also included for a method for controlling a hybrid drive train of a motor vehicle.
