Abstract (en)
[origin: WO2008116537A1] The invention concerns a composite conducting material for transferring energy and a method of producing such a material. The composite conducting material comprises a fabric (10) constituting a base material for the composite conducting material and at least one electrically conducting element (20) associated with the fabric. The fabric (10) is characterized in that it has a structure that is expandable and that the at least one electrically conducting element (20) is associated with the fabric in such a way that the composite conducting material is expandable.
