Abstract (en)  
[origin: WO2008116434A1] The invention relates to a reinforcing device (6) for prefabricated parts (1), which comprise a plurality of elements (2, 3) that are arranged substantially parallel to each other, produced of a casting compound (G) that can be hardened, and are connected to each other by at least one connecting device (6). The connecting device (6) is implemented by tensile, pressure, and shearing elements (7) that are connected to each other by means of a composite component (8), wherein the ends of the tensile and pressure elements (8) and also the edges of the composite components (8) are anchored in the casting compound (G) of the elements (2, 3) that are arranged substantially parallel to each other.
