Abstract (en)
[origin: DE202007006223U1] The movable window part is assembled of four frame elements (1,2,3,4) and the window pane and can be swiveled around a horizontal as well as around a vertical axis. A connecting rod (5) is covered by an outer pipe (6) and positioned inside a groove at the frame. It is moved and locked by a toothed drive element (7) and three return elements (8.1,8.2,8.3). An extension at the rod (5) in a T-shape serves as a distancer facilitating a motion of the connecting rods in relation to one another and an assembly of some of the parts when the return elements (8.1,8.2,8.3) are already in place.
