Abstract (en)
[origin: DE102007014764A1] The solenoid switch (1) has a relay housing (2), which has a relay cover (8) of plastic at the front side, in which the relay connections are intended. The relay connections are formed by the cover wall in passage openings to push relay pins (12,13). The relay pins are fixed for cover wall by axial clamping against the wall sides lying outside opposite to each other in area of the edge area surrounded for passage openings. The relay cover consists of a elastically deformed plastic with compression set and is axially formed in the area of a edge area of the passage openings.
