Abstract (en)  
[origin: WO2008125336A2] In order to improve and simplify the handling and use of automation systems, particularly programmable logic controller (PLC) the invention provides a method for accessing a control module (410) that can be executed in a control device (400) for controlling an automation system, wherein the control module (410) is configured to execute a function (600) on the control device (400), wherein the method provides that the control module (410) and a first (420) and a second (310) interface module are provided in the control device (400), the control device (400) is connected to an operating device (300) via a network (500), the second interface module (310) is transmitted from the control device (400) to the operating device (300), the second interface module (310) is executed by the operating device (300), and the data is transmitted between the first (420) and the second (310) interface modules. The invention further provides a control device configured for carrying out the method.
