Abstract (en)

[origin: WO2008135359A1] The invention relates to a storage device (2) for transporting and/or storing nuclear material, including a main structure (5) defining at least one housing intended to house the nuclear material. According to the invention, the container also includes a mobile heat-conducting structure (8) forming at least part of an outer side surface (7) of the storage device, said mobile structure (8) including at least one mobile heat-conducting element (10) mounted on the main structure (5) such that it can be reversibly moved from a retracted position to a deployed position by separating same from the structure (5).
