Abstract (en)

[origin: WO2008128958A1] The invention relates to a method and a device for controlling a data rate having a predefined transmission delay and a current transmission delay, wherein the following steps are performed: -Lowering the data rate, if the predefined transmission delay is smaller than the actual transmission delay and a differential current transmission delay exceeds the time = 0, - Increasing the data rate, if the predefined transmission delay is greater than the current transmission delay and a differential current transmission delay exceeds the time = 0.
