Abstract (en)

[origin: EP2141081A1] The container (100) has a sliding element (106) for closing a removal opening, where the container is made of plastic. A guide element (108) is arranged at the sliding element, and another guide element (110) is arranged at a front wall (104). The guide elements are formed such that an opening- and closing movement of the sliding element is defined. The former guide element is formed on a front side of the sliding element, and has a retaining element (112) e.g. catch, for clamping the sliding element in a preset opening- and closing position. The guide elements are designed as guide rails.
