Abstract (en)

[origin: EP2141084A1] The closing cap (1) has a main part (3) formed in rotation symmetric around an axis (Z), where the closing cap is made of plastic. An originality securing element (5) stands in connection with the main part. The main part and the securing element are formed as a single piece and are connected with each other by a foldable bar (9). A band (11) attaches at a lower side of the securing element as a single piece, where the band moves from an area of the securing element from an opening position to a closing position that engages a holding projection of an end area.
