Abstract (en)

Apparatus and method for removing an electrodeposited metal layer from a cathode plate comprising a feeding zone, a metal stripping unit, a discharge zone, and a carousel with a substantially horizontal axis of rotation comprising engaging means such that: (i) in a first position, first engaging means face the end of the conveyor feeding line so as to pivotally engage the first coated cathode plate present on said line; (ii) In a second position, the engaged first cathode is brought into position in the stripping unit by rotation of the carousel, whilst a second coated cathode is engaged into the next engaging means of the carousel; and (iii) In a third position the stripped first cathode plate is discharged onto the discharge zone by further rotation of the carousel whilst the second cathode is brought into position in the stripping unit and a third coated cathode is engaged in the next engaging means facing the conveyor feeding line.
