Abstract (en)
The present invention relates to an engine and an engine-driven work machine including a work machine driven by the engine. An engine-driven work machine includes a base for supporting a work machine composing of an engine and a work machine main body driven by the engine, a receiving vessel mounted to the base to accumulate a leaking substance leaked from the work machine, a fuel tank having a form of quadrangular prism mounted to the base to accumulate the leaking substance leaked from the work machine, a height regulating member formed to have a gradient having a height difference in a bottom surface of the receiving vessel to maintain horizontally the fuel tank, and a drainage portion for discharging the leaking substance accumulated in the lowest portion of the bottom surface.
