Abstract (en)
[origin: EP2141423A1] There is provided a system (101) for controlling supply airflow temperature along a supply airflow line (102), wherein the supply airflow line comprises a first temperature-affecting device (104), a second temperature-affecting device (106), a first sensor (110) and a second sensor (112). The system further comprises a controller (116), wherein the controller (116) is configured to receive a first actual value from the first sensor (110), a second actual value from the second sensor (112), and a set-point value from a receiver (142), and to control the first temperature-affecting device (104) based on the first actual value and the set-point value, and to control the second temperature-affecting device (106) based on the second actual value and the set-point value.
