Abstract (en)
[origin: EP2141440A1] A bullet-loading assembly (3) is mounted on a toy gun. The toy gun has a body (1) and a triggering assembly (2). The body (1) has a handgrip (10), a bullet chamber (11), a guiding slot (14) and a bottle chamber (16). The triggering assembly (3) has a bolt (20), a trigger (21) and a hammer (24). The bullet-loading assembly (3) has a barrel (1A), a bullet passageway (15) and a limiting member (30). The barrel (1A) is mounted on the body (1) and has a rear end and a bore. The bullet passageway (15) is defined through the handgrip and is located adjacent to the barrel (1A). The limiting member (30) is mounted securely around the barrel (1A) and has a limit (301) pressing against an uppermost ball bullet (4) in the bullet passageway (15) to prevent more than one ball bullet (4) from entering the bullet chamber (11). When the trigger (21) is pulled, the barrel (1A) and the limiting member (30) move back, the rear end of the barrel (1A) engaging with the front end of the bolt (20) and receiving the uppermost bullet (BB).
