Abstract (en)  
[origin: EP2141554A2] The assembly has a push button (2) including a head (21) with an extension (212) that is slidably mounted in a tube (22) such that the tube is movable in translation. A rod (23) i.e. screw, is integrated to the extension, and displaced inside a time piece case based on pressure exerted by a user on the head. A unique flat spring (24) e.g. lock washer type flat spring, exerts force that is applied with respect to axis (28) of the tube in off-centered manner on the head for extending the head from the button. The spring is placed on the head and oriented from a side of the extension.
