Abstract (en)

Methods, devices, and systems for determining a progressive multiplier in a bonus game associated with a networked game of chance played over a communication network. The progressive multiplier may be determined over the course of one or more rounds of the bonus game and may be awarded to a player who wagers in the game of chance or is awarded winnings in the game of chance. The value of the resulting progressive multiplier may then be applied to the player's wager or winnings to increase or decrease the value of the wager or the winnings. By offering players the opportunity to increase the yield of their wagers or winnings, an operator of the game of chance may increase the attractiveness of the game of chance to players.
